

Concept Creation,  
Project Management, Planning

## Future-oriented and Sustainable.

Nothing is more important for the success of complex large-scale events than reliable, future-oriented, and sustainable planning. NUSSL has developed flexible as well as sustainable concepts for well-known sports and cultural events around the globe.

Our concepts are based on the idea that there must be a balance between the use of event infrastructures for the specific event and the use after the event. This concept ensures that maintenance and operating costs as well as over-capacities are eliminated completely after the event. Based on our unique modular system solutions, we provide cost-efficient structures quickly, optimized for their intended use. We fulfill the highest quality standards in terms of safety and aesthetics.

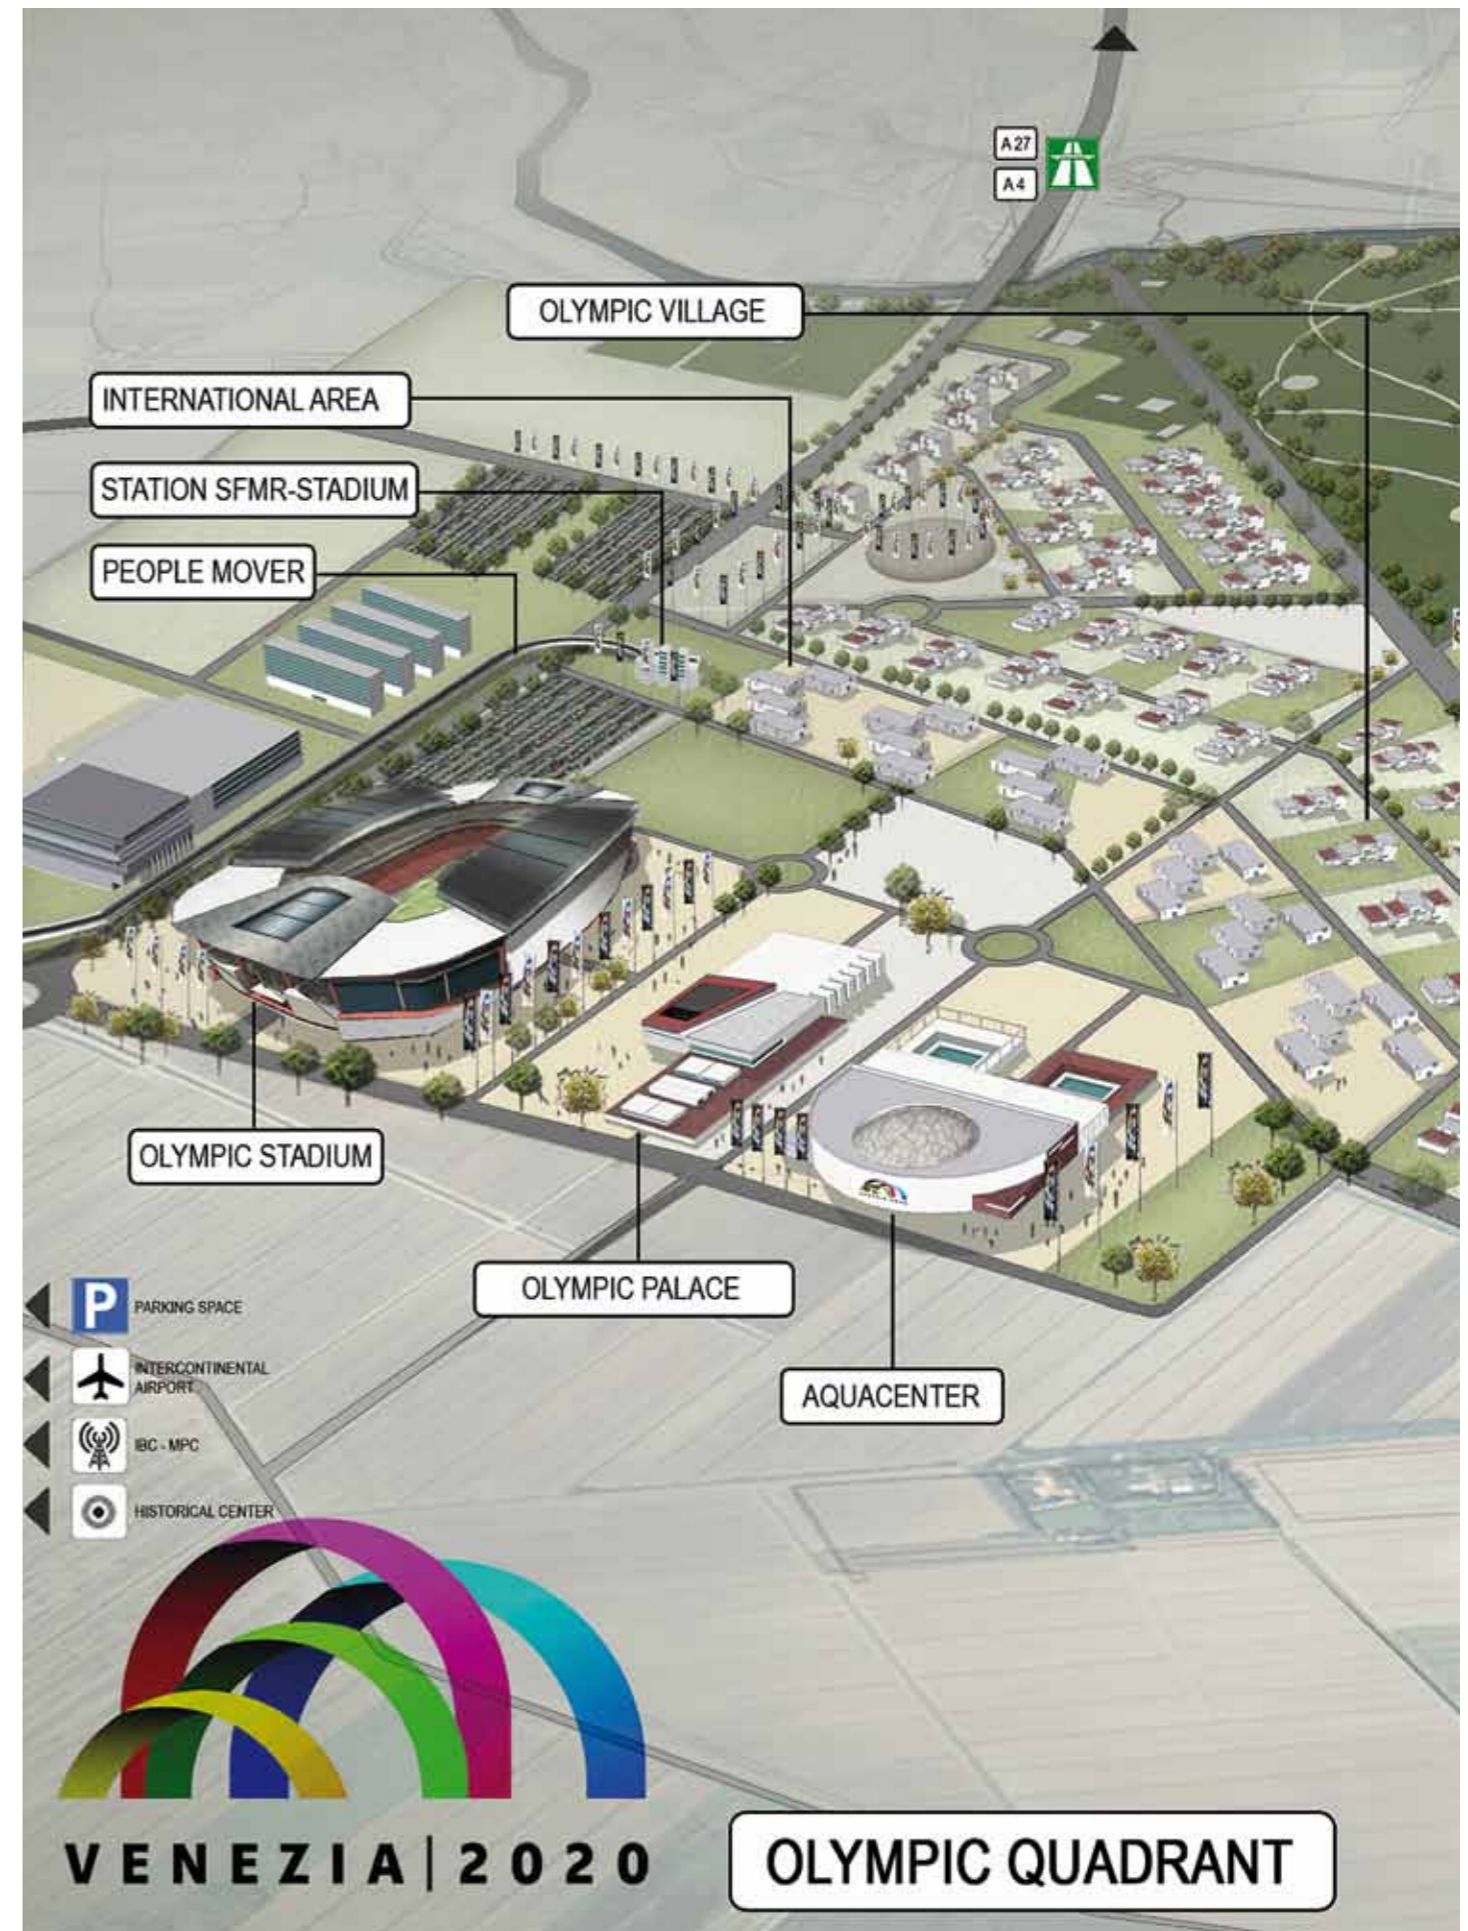

# Firsthand Competence.

Our services incorporate the know-how from international sports and cultural events of world renown. The experiences from previous projects benefit all our concepts – and make them unique, affordable and reliable. Our planners put together studies, develop concepts, verify feasibility, plan temporary as well as permanent structures, calculate budgets, create time schedules, define specifications, and initiate tender submissions.

NUSSLI can do even more – we do not just plan, we implement: Where desired, we take on the entire event from the initial idea to planning and implementation, and take care of every detail of the project. NUSSLI can additionally provide maintenance services during the event. Sustainability is a matter of course, when you rely on NUSSLI for planning, consulting, and implementation.

## Step by Step to Success.

### Concept Creation:

We develop studies and define the exact project parameters with technical specifications and relevant documentation. Our solution strategies prevent planning errors, demonstrate technical options, and keep costs low.

### Project Management:

We prepare all planning steps in detail – from visitor volumes to evacuation concepts to line-of-sight analyses and create the bid documentation on the basis of this data.

### Planning:

NUSSLI takes charge of the entire overlay planning for all temporary infrastructures, including time and budget management.

### Implementation:

During the implementation phase, NUSLI takes on the technical project management and verifies the correct implementation of all requirements. Quality and time management form part of the NUSLI service portfolio as well.

## Sustainability Creates Added Value.

Up to just a few years ago, sustainability was not much of a consideration when it came to large-scale events in sports or culture. NUSLI's pioneering work in this sector in recent times has helped promote a new way of thinking among event organizers.

The following benefits can therefore come to the fore:

- Cost savings and reduction of investment
- Less space requirements
- Time savings
- Kudos based on sustainable project developments
- Less administration, specifically during the approval phase
- Events gain more acceptance, as there will be no need for tax payer's money for upkeep after the event
